

HIGH TECH MEET LOW MAINTENANCE.

MEET Las Vegas is engineered to expand the limits of your technologically complex event. We have spared no expense integrating and supporting the key elements of today's event technologies.

Network Infrastructure and Security

- Fiber optic backbone between Juniper switch stacks allows for maximum data transfers
- Our state-of-the-art network infrastructure provides security conscious guests with peace of mind
- Event Internet Bandwidth services are available up to 250Mbps and beyond if necessary
- Wireless Managers and Network Access Control includes options for all major modes of authentication and mobility without losing sight of system security

Audio Visual

- Abundant A/V and power Connectivity Panels on floors, walls and ceiling bays for easy connections
- Gigabit speed transport of high-resolution imagery to our Crestron video control system provides hi-definition content to LCD screens and monitors throughout the facility
- Universal plug-and-work capability, from laptops and media players to DVD and high-definition media and beyond
- Cutting-edge digital signage allows for complete customization for branding opportunities
- Voice Over IP and analog phone services are available anywhere in the building
- Built-in Fog Wall and mobile HD LED wall available for unique branding and video enhancement

In-house Services and Support

- Uniquely customizable interior lighting elements on the first floor can be used to expand on the existing Martin Cyclo fixtures
- Fully customizable Illumivision LED exterior lighting
- Our expertly-integrated Executive Boardroom includes all the traditional audio and visual meeting tools
- Remote webcasting capabilities for presentations offer maximum exposure during real world events
- Equipped with ample security monitoring, electronic entry controls and full range of IT and production technical support
